Report to the Citizens

During the fourth year of operation, our Center once again enjoyed continuing progress and improvements in client care. Fiscal year 1978 was a transition year with the Center moving from its infancy toward maturity with a corresponding improvement in services. During the first three years of our existence, MHMR established a network of community-based services which attempted to meet many of the needs of mentally handicapped citizens in the Deep East Texas area. These fundamental services have been improved and expanded during this past year. Our budget increased from $2.3 million in FY 1977 to $2.5 million in FY 1978, with this 10% increase in funding not providing for extensive growth in the number of services offered. In view of this, the Board concentrated its efforts in the areas of improving quality of services, meeting external standards, and setting priorities for future service delivery programs.

One of the program priorities established by the Board was that of serving previously institutionalized individuals. Our Center was selected as one of three in the State to pilot a proposed rule on prescreening and aftercare. As a result of this program, our Center placed a full-time employee at the Rusk State Hospital to participate in predischarge planning conferences on all individuals being discharged into our 13-county area. This system helped insure that all persons coming out of the State Hospital were linked up with appropriate community-based services. This process has helped persons discharged from the State Hospital to remain at home, and should reduce the frequency of the "revolving door" admission of some individuals. Progress was also made in establishing prescreening programs with local officials to help keep individuals out of the State Hospital. We anticipate that the prescreening and aftercare program will provide our Center with the opportunity to prevent inappropriate institutionalization of persons in state hospitals and state schools, and promote the timely discharge of other persons already residing in these facilities.

Quality of services to our clients continued to be a top priority for the Center. We remained committed to the evaluation of programs in order to insure that clients benefit from our services. One major indication of the level of quality of services is that of compliance with appropriate standards. Our Center maintained its certification as an approved Community MHMR Center by the Texas Department of Mental Health and Mental Retardation (TDMHMR), as well as meeting and exceeding the standards of the following agencies: National Institute of Mental Health, Texas Commission on Alcoholism, Texas Education Agency, Texas Rehabilitation Commission, Intermediate Care Facilities for the Mentally Retarded, Department of Human Resources, and others. Also, the Center once again received a very favorable report from the Peer Review Team. The Board of Trustees presently contracts with an outside consulting group to evaluate the services provided by our Center. The results of the Peer Review Report for FY 1978 are some of the most positive we have yet received. Specific results of the Peer Review process will be discussed in more detail in another section of this report.

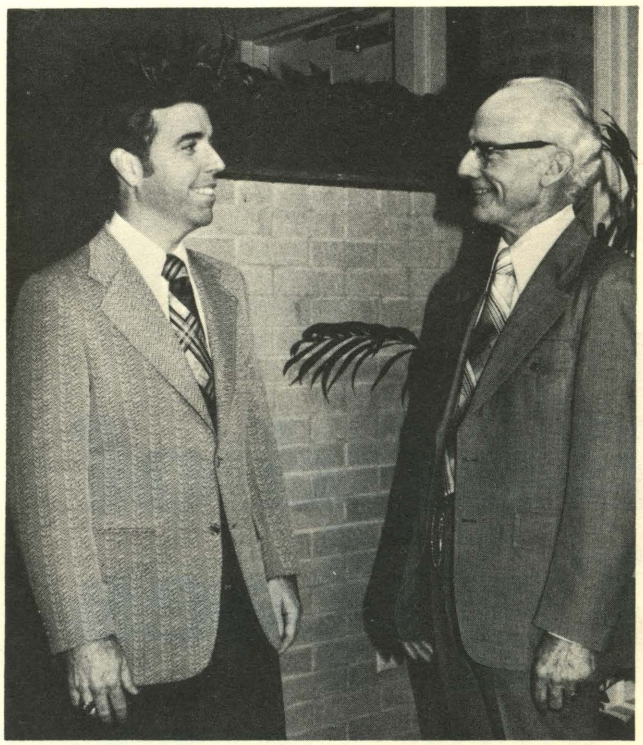

Our center was also selected as one of three in the State to pilot a new set of pro-

gram standards published by TDMHMR. During the pilot testing phase, we met 90% of the standards covered in the manual.

Another primary area of emphasis this past year has been that of cost efficiency. The entire staff has worked diligently toward providing quality therapeutic services in a cost efficient manner. Projections based on computer printouts received from TDMHMR indicate that approximately 90% of all services offered during FY 1978 were in line with the State median costs for similar services. The remaining programs should fall in line with the State median during the upcoming fiscal year. We believe everyone associated with the Center should be proud of this record. For a relatively new center to achieve such a high degree of cost efficiency, when having to contend with "start-up" costs associated with beginning new services, is an enviable record.

Our Center participated in numerous site visits, audits, and program evaluations this past year. Each of these was, of course, important in its own way and was beneficial for the Center when it helped us improve our programs. One of the most important audits was that done by the Management Audit Team of TDMHMR. This team of professionals conducted a thorough audit of the Center's administration procedures and management. Once again, our Center was able to achieve a very high rating with the results of this audit being extremely favorable. One of the recommendations made by the Management Audit Team was that the Center needed to finalize its plans regarding computerizing the financial record system of the Center. Toward this end, our Center contracted with the City of Lufkin to use their computer hardware and developed the software package necessary for this system. We anticipate this will be completed and functional by January, 1979.

Our Center was fortunate to obtain special grant funding for a Day Treatment/ Administration Facility through a $225,000 grant from the Department of Health, Education and Welfare, a $45,000 contribution from the T.L.L. Temple Foundation, and $30,000 from Center funds. This

Board of Trustees Chairman Ward R. Burke, right, confers with Executive Director Wayne Lawrence, Ph.D., before one of the Board's monthly meetings.

building, which was occupied in January, 1978, has provided excellent facilities for our day treatment program as well as central administration offices.

MHMR has continued to enjoy the support of numerous local citizen groups and individuals. The 11 participating county commissioners courts have continued to provide their local match funds without which we would not be able to provide our services. Also, the county advisory councils in each of these 11 counties have provided invaluable support, direction, and constructive criticism for our Center. In addition to these, the Regional Professional Advisory Committee has continued to function and has given exceptional leadership to the Board and staff on numerous important issues. Also, hundreds of volunteers have donated thousands of hours of services to our clients. We would like to express our appreciation to each person and group who has helped our clients receive better care, and pledge to each of you our continued dedication toward this goal.

Board of Trustees

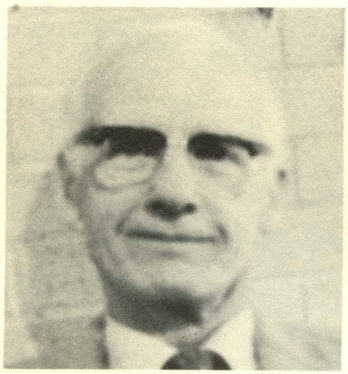

The Deep East Texas Regional MHMR Services operates under the direction of a nine-member Board of Trustees. Members are appointed by the County Commissioners' Court in each of the thirteen counties served by MHMR. Appointments are for a two-year period and a member may be reappointed. The Board is the legal governing body responsible for establishment of the policies that govern the operations and functions of MHMR and its employees.

The statutory authority for the Board of Trustees comes from Article 5547-204, Section 4.01, V.A.C.S.

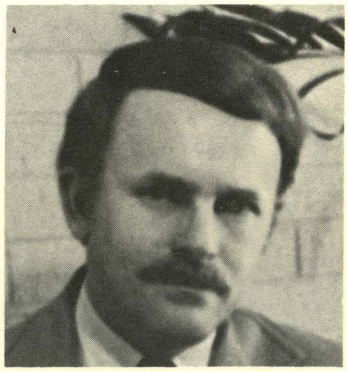

During FY 1978, two new Board members were appointed. Nancy Speck, Ph.D., replaced the Rev. Jerry Self as the Board member representing Nacogdoches County. The Rev. Self left Nacogdoches to accept a position with the Tennessee Baptist Convention in Memphis, Tennessee. Dr. Speck is a resident of Nacogdoches, Texas. She received her Ph.D. from Texas Women's University in Special Education with a research interest in Gifted Children's Education. Dr. Speck teaches in the School Services Department at Stephen F. Austin State University. She is an active civic and church leader.

Mr. Roy Woolley replaced Mr. Tom Mann as the Board member representing Shelby, San Augustine and Sabine Counties. Mr. Mann resigned from the Board in order to pursue interests in a private business.

Mr. Woolley is a resident of Center, Texas, in Shelby County. He has a Bachelor of Science in Agriculture Education from Oklahoma State University. He is currently an administrator with Shelby County Home-Health Care, Inc. Mr. Woolley is actively involved as a civic and church leader in the Deep East Texas region. He is on the Governing Board of the Greater East Texas Health Systems Agency as well as serving on several advisory boards of the area Council of Governments.

Mental Health Division

A number of changes have occurred in the Mental Health Division during the past fiscal year. Among the most important ones was the development of a 24-hour, toll-free crisis line. This program was begun in October, 1977 and has gained increased interest from the general public. Calls have not only been received from the Center's catchment area, but have also come from other areas throughout the state. It is felt that this service has helped to meet a very important need for crisis intervention services in our area.

The implementation of the "aftercare project" has ushered in a dramatic change from the past with regard to the cooperation between our Center and state hospitals. This pilot project was begun in April, 1978 and has involved MHMR and State Hospital staff working closely together to develop plans for aftercare of persons discharged from Rusk State Hospital. The project was begun in efforts to implement the Commissioner's Rule on Aftercare. It is our hope that this project will be part of a series of cooperative efforts between Rusk State Hospital and our Center.

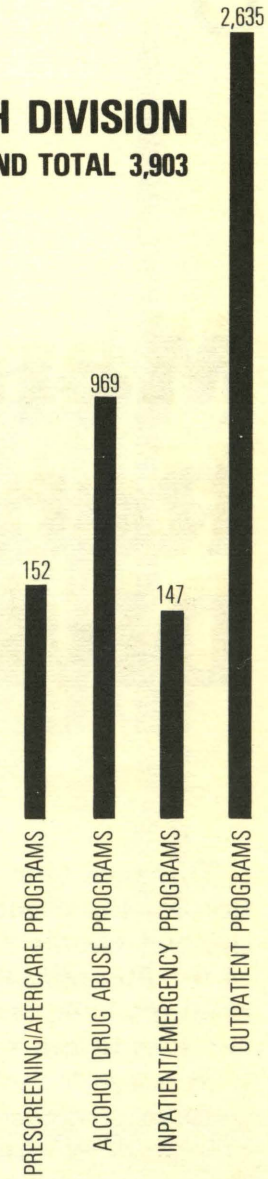

Jack Martin, Ph.D., Director
Mental Health Division

During the past year, a concerted effort has been made to develop those services necessary to comply with NIMH standards for Community Mental Health Centers. In efforts to meet this goal, some new services have been added to the Center's programs. A major emphasis has been in the development of Services to the Elderly. A Coordinator of Services to the Elderly was employed to work with elderly persons who are experiencing some type of mental or emotional problem. Home visits are made by Center nurses to assist these persons in the proper maintenance of medication and to monitor their condition. The response to this program has been extremely positive.

CLIENT STATISTICS MENTAL HEALTH DIVISION

GRAND TOTAL 3,903

One of the most important developments during the past year has been in the area of psychiatric services. The Center has added a third, full-time psychiatrist to its psychiatric staff which has allowed for the provision of more comprehensive psychiatric services to Center clients. Our medical staff is working with local physicians in efforts to coordinate referrals and insure the delivery of psychiatric services to area residents.

In summary, FY 1978 has seen a number of changes in the Mental Health Division. Although relatively few staff were added, several new services were begun which have expanded our services and provided more extensive crisis intervention and aftercare programming.

Staff evaluate a work activity project being done by elderly clients at the Angelina County Day Treatment Program.

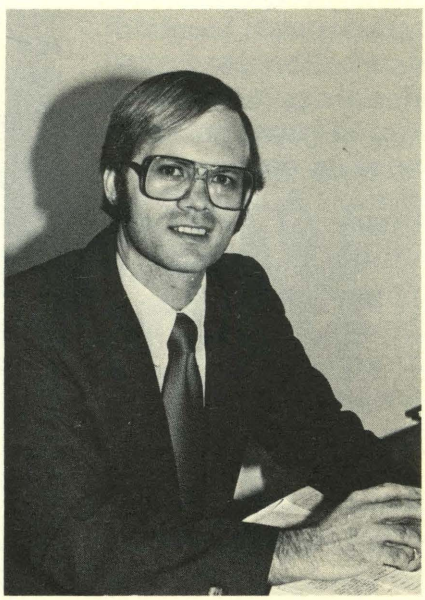

The psychiatric staff are, from left, Warren Sibley, M.D., Kenneth Vogtsberger, M.D., and Acting Director Jane Higbee, M.D.

Mental Retardation Division

This past year proved to be one of transition for the Mental Retardation Division and the 864 clients served. With the enactment of the Mentally Retarded Persons Act, many changes have occurred in the delivery of services to our clients. The new law requires a comprehensive diagnosis and evaluation prior to a mentally retarded client receiving any services. The new law also spells out the guardianship rights and limitations for clients and their families. This law enables the client, in many instances, to render legally adequate consent for services. To insure the rights of the clients, a Public Responsibility Committee, composed of nine members representing the region, has been formed to hear any complaints regarding possible denial of rights.

Infant stimulation services were added during the year, and served 28 clients and families. Speech and hearing services were also made available to each client when recommended by the Interdisciplinary Team which designed the individual program plan for the client. Every parent or guardian was given the opportunity during the year to participate as a member of the Interdisciplinary Team to assist in planning services for the client.

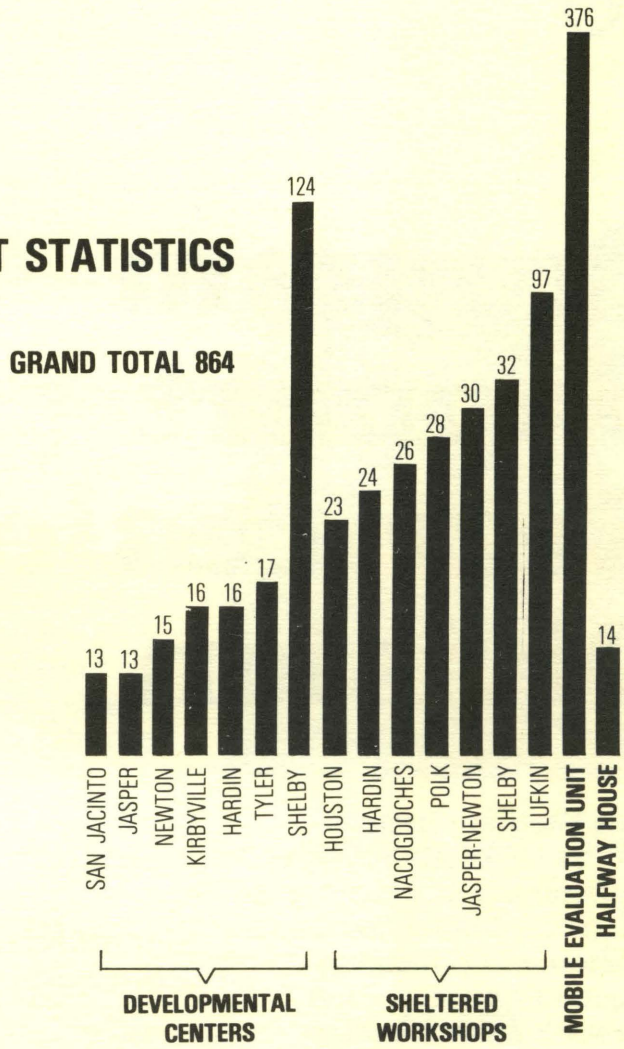

The Mobile Evaluation Unit has continued the casefinding efforts in the 13-county catchment area. Every effort was made to locate alternate services such as public school programs prior to admitting a client to a MHMR service. Families were advised of private services and other public services prior to admission.

Russ Burbank, Director
Mental Retardation Division

MENTAL RETARDATION DIVISION CLIENT STATISTICS

The sheltered workshops have continued to secure new contracts in an effort to provide a variety of job training experiences.

New or remodeled facilities were obtained for the Kirbyville Developmental Center, Hardin County Developmental Center, Hardin County Sheltered Workshop and the Nacogdoches County Sheltered Workshop. Local advisory councils were involved in securing the improved facilities. By sponsoring open houses for these facilities, more citizens in the communities were made aware of MHMR services available in their communities. Additionally, the five Associations for Retarded Citizens now organized in the region have assisted the programs by serving as advocates for the clients and supporters of the program.

The staff has worked closely with private nursing facilities to follow-up clients discharged from state schools into the region. Implementation of the Aftercare Rule between this agency and Lufkin State School has demonstrated how agencies working cooperatively can assist the client in adjusting in the community.

Public school involvement for handicapped school age clients continues to increase. As a result of this process, we have been able to begin a process of phasing clients back into the public schools. During FY 1978, a total of 53 clients returned to public schools.

State Representative Bill Haley, left, discusses screen assembly process with workshop client at the dedication ceremony of the Nacogdoches Sheltered Workshop.

Program Support Services Division

The Program Support Services Division provides programming in the areas of Personnel Services, Consultation and Education, Volunteer Services, Staff Orientation and Development and Research, Planning, and Evaluation.

Personnel Services

A major goal of Personnel Services is to provide a qualified pool of applicants from which to select MHMR staff. During FY 1978, 976 applicants were screened. A total of 412 applicants were interviewed for 58 positions. An average of 7 applicants were interviewed for each position filled.

During FY 1978, A total of 49 employees terminated for an annual turnover rate of 31% which is the average median turn-over rate for MHMR Centers in the State of Texas.

At the end of FY 1978, there were 122 employees on staff with MHMR.

Consultation and Education

The Consultation and Education Program (C & E) was established during FY 1978 to provide mental health information, education, guidance in community organization, and case program consultation to agencies, organizations and practitioners.

Consultation and Education services are delivered in three forms: consultation, professional education and community information and education.

Staff Orientation and Development

A major emphasis during FY 1978 was management/supervisory development. A supervisors' orientation was initiated for all new supervisors and staff. In addition, two management training seminars were sponsored for existing managerial staff.

All 58 new employees received an extensive two-day employee orientation about MHMR, its services, procedures and philosophy.

Also, MHMR employees received a total of 7,544 hours of training for an average of 61 hours of training per employee.

Volunteer Services

Volunteer Services was in its second year of operation during FY 1978. A major event during the year was the First Annual Volunteer Recognition Banquet held at the Lufkin Civic Center. Over 200 volunteers were honored with 71 receiving volunteer pins for 100 hours of service or more.

During FY 1978, a total of 421 volunteers donated 27,878 hours of volunteer time to MHMR programs. This translates into an approximate dollar value of $73,800 in man hours donated to our clients. Even more importantly many clients were exposed to the special compassion that only volunteers can provide.

The eleven county advisory councils of MHMR met a total of 45 times. Input from advisory councils was instrumental in unit planning and increasing public awareness within the communities.

Research, Planning and Evaluation

Research, Planning and Evaluation was programmatically assumed under the direction of the Program Support Services Division during FY 1978. A library containing 1,247 volumes is maintained as a research resource for MHMR staff. A five-year plan was completed during FY 1978. The major emphasis, however, during the year for this program was in the area of evaluation. The evaluation process includes Peer Review provided by a consultant and an internal evaluation of units through site visits by Program Support Services' staff.

Peer Review

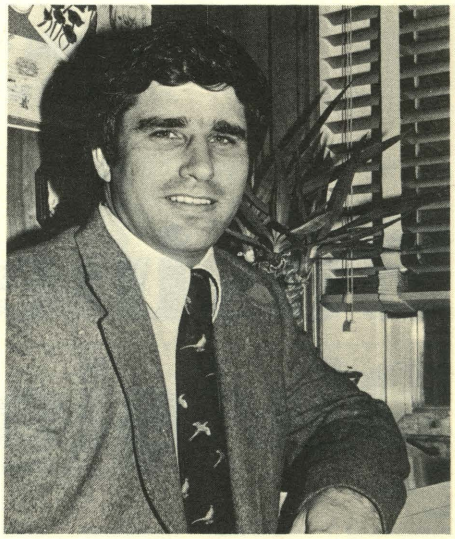

MHMR contracts its peer review process with Planning, Consultation, Evaluation Associates of Nacogdoches. The process of contracting peer review to an independent consultant not affiliated with MHMR is unique to our Center. The FY 1978 Peer Review Report was extremely favorable. The Client Satisfaction Survey, which is part of the peer review process, is shown below.

Memorial Fund

Also approved by the Board was the establishment of a Living Memorial Fund to provide a way for citizens to remember a departed friend or family member.

The plan is funded by donations to MHMR that provide a living memorial to a departed friend or family member and contribute to the efforts of MHMR in providing services for the handicapped citizens of the region.

The families of those whose memories are so honored receive an attractive memorial card on the donor's behalf. The donor receives a card thanking him for the donation.

Jim McDermott, Director
Program Support Services Division

Business Division

One of the most significant developments within the Business Division during FY 1978 was the establishment of a Management Information System.

The Center had reached a point that manual processing of accounting, payroll, client data and personnel records were becoming financially prohibitive.

An automated date processing system for accounting, payroll and client data was planned during FY 1978. This system will be fully implemented during the next fiscal year.

The system will be in-house, using our input terminal and the City of Lufkin's computer hardware.

Data input will be transmitted from our facility via telephone lines.

Frequency of Mental Health Problems: 31,893
Frequency of Chemical Dependency: 19,096
Frequency of Mental Retardation: 10,571

Are We Helping?

What difference does it make to the Deep East Texas region to have an MHMR service available? Are we helping? Is it worth the money? The answers to these questions are important to every citizen and taxpayer of Deep East Texas.

Throughout this annual report, client statistics and budgetary information have been provided. As has been stated earlier, a total of 4,767 clients were served by MHMR during FY 1978 and a total budget of $2,578,924 was expended. During the previous fiscal year, a total of 2,347 clients were served at a total budget of $2,202,542. During FY 1978, there has been a 51% increase in client caseload with only a 17% increase in budget.

One measure of cost effectiveness is to calculate the average cost of serving one client for one day. The per day cost for a client of MHMR during FY 1978 was $1.48. If this figure is compared with the average cost per day, per client with a state hospital (i.e. approximately $60.00 per day) the cost effectiveness becomes even more obvious.

A major goal of MHMR Centers is to work with people experiencing emotional and mental retardation problems in their home communities. State hospitals and state schools play an important and integral role in the total delivery of mental health and mental retardation programming. Their primary function should be to work with clients who are a danger to themselves or others. MHMR has a goal of reducing admissions and readmissions to state hospitals and state schools. During FY 1978, the average admissions to Rusk

State Hospital from the Deep East Texas region has dropped from 2.3 persons per thousand in FY 1977 to 2.0 persons per thousand which is the same as the statewide average. This represents a 13% drop in admissions.

By helping people within their own communities, not only are tax dollars being saved by avoiding the expenses of institutionalization, but also the individual is able to stay within the home community, maintain employment, and continue as a taxpayer.

The client satisfaction survey conducted by the Peer Review Team asks clients of MHMR their opinion of our services (see charts). This is a good measure of the clients' feelings about the services they receive and if they are being helped. The overwhelming response given by MHMR clients is that the services are helping with the clients' problems, are accessible to the clients, and are delivered in a courteous and rapid fashion. Clients indicate they are willing to use the services again if needed and would recommend the services provided to others.
