PUMP ENGINE COMPONENT

Natural Gas Engines manufactured by Arrow.
Electric Motors manufactured by Worldwide.

OILFIELD TOUGH

Over 75,000 Arrow engines are powering pumping jacks in oilfields all over the world. Many of the original engines built in the 1940's are still operating today. Electric Motors meet or exceed EPACT levels.

CONTINUOUS DUTY

Engines are designed to run continuously 24 hours a day, day after day, with dependable performance as needed.

EASY MAINTENANCE

Designed for quick, easy field maintenance.

FUEL SUPPLY

The Petro Hydraulic Lift System can be operated with either Natural Gas, Casing Head Gas, or Diesel, whichever is deemed more economical. Electric models are also available.

POWER

Horsepower ranges from 17HP to 67HP depending on fuel supply, engine speed, and application.

HYDRAULIC LIFT UNIT

Simple to operate. Computer controlled up/down stroke within 1-2 amps on electric motor counter balance or use economical gas operated unit.

ETRO HYDRAULIC LIFT SYSTEM

A new and unique design in petroleum lifting technology... Replacing old Beam Balance (Horse-Head) pumping units, and is more efficient and cost effective to operate.

ROD DESIGN

"No compression" factor eliminates premature rod failure and unnecessary tubing wear, resulting in longer run time. Will match and possibly exceed previous production, depending on well condition.

QUICK SETUP

Unit can be setup in about 3 hours or less, and footprint takes up minimal space as compared to the Beam Balance unit.

LOW MAINTENANCE

No moving parts / bearings or seals to grease. Once every six months, change filters and analyze the Hydraulic oil.

SAFETY FEATURES

Safety features, including oil level, temperature, and pressure indicators, will shut down the unit automatically when necessary.

ELIMINATE DOWNTIME

This unit can be quickly set up to temporarily replace old pumping units down for repairs, thereby reducing or eliminating production downtime.
